MAC Water Technologies recognizes the specific needs that Laboratories, Food Ingredient and Pharmaceutical Manufacturing Industries require. To this industry it is essential that they demand more of their De-Ionization (DI) program. Their DI program must provide them with the highest quality product, resulting in consistent production levels with the highest quality response in customer service. Without that you could be putting the quality of your product at risk. If you are not confident then, know that MAC Water Tech specializes in that "niche" market.

Because, you demand only the best of your DI bottle exchange service. You already know that when you mix your high purity application resins with other uses, it lowers your initial quality, reduces tank longevity, and compromises consistent performance. By strictly catering to your upper clientele's needs, *instead of serving everyone in the market*, we give you more for your money, not to mention your peace of mind

## **Why should you choose MAC Water Tech?**

**At MAC** - we only use the highest purity resins with no inert or chemical by products. This gives longer run volumes, resulting in more for your money.

**At MAC** - every tank is resistivity tested at the designed flow rate, and tagged after regeneration. This testing ensures consistent run volumes, saving you money, and you know exactly what you are buying.

**At MAC** - every tank is shipped dry and air tight. Shipping and storing exchange bottles with water inside, allows the possibility of mixed bead resins to separate because the cation and anion resins have different densities. Shipping and storing the tanks dry maintains the proper mixture of beads which eliminates the possibility for resin to separate. This also allows the mixed beads to be stored for longer periods of time. All of these quality practices ensure consistent and long run volumes, saving you money.

**At MAC** - extra resin bottles are stored in your facility. You will never again rely on a technician to deliver new bottles or be without fresh DI bottles again!

## **Free Participation in the MAC Water Challenge!**

*We are so confident that our quality will save you money - compare us to our competition. MAC Water will connect a water meter, at no cost to you, to our competitor's tank in your facility. The water meter will monitor your run volumes. Then, you will be able to see for yourself if you are getting your money's worth from your current supplier.*

You Can Also:

- Reserve specific resin types and bottles for you facility only.
- You get the same resin and tanks every time.
- You won't share resin with another company.
