

**This new product, AquaDrop, has been developed to meet the needs in over 120 countries providing water to those who have no access to clean drinking water.**

The concept for the AquaDrop is simple, but the impact is life saving. Put a hose into any fresh water supply, such as a lake, a river or a well. The AquaDrop produces filtered and disinfected drinking water using naturally produced power. Power sources available can be solar, wind, man-powered turbine, back-up generator, or back-up electric grid.

The AquaDrop meets the needs where the waterways are contaminated and diseased with fecal, cholera, parasites, viruses, and other bacteria and unhealthy contaminants.

This system can be customized to be stationary or mobile, providing safe water to the people instead of the people walking miles to and from a clean water supply.

**Problem:**

COST - buying, shipping, distributing and storing water bottles

ENVIRONMENT - the impact of used bottled water trash and disposal

INSTALLATION - utility repair in remote areas

POWER - not available or not feasible

HEALTH - water supply Not Safe to Drink!

UPKEEP - continuous need to purchase replacement filters, accessories

CONTAMINANTS - water related health, cleanliness, sickness current and future

MANPOWER - the required manpower and coordination

RESPONSE - long response time

SUPPLY - the need to replenish the water supply

**Solution:**

• Can Refill Water Bottles and Other Containers!

• No Environmental Impact!

• No Installation Costs!

• No External Power Required

• Unlimited Clean Water to Drink, Bath and Cook with!

• No Maintenance Required!

• Removes All Harmful Contaminants!

• One Person Startup, Requiring No Further Attention!

• Instant Response Time!

• No Wait Time to Replenish Supply!

**Benefits and Capabilities:**

- 100% Naturally Powered
- Back-Up Generator Available
- Ease of Portability
- Variable Flow Rates Available
- No Cartridge Filters to Purchase, Clean, or Replace
- No Trained Operator is Needed
- Internal Water Storage Available
- Easily Deployed Anywhere in the World

**Global Applications Include:**

- Disaster Relief
- Emergency Services
- Rural Water Needs
- Any Remote Water Needs
- Military
- Irrigation and Livestock
- Work in the Mission Field
- Many Others!

- As you can see the AquaDrop use's are unlimited to your need for safe water to be distributed, anywhere, anytime, for any reason.....
